AB - J05339557 The compsn. contains thermoplastic resin and a tackifier, one or both of them contg. poly-lactic acid or lactic acid copolymer resin derived from lactic acid and other hydroxycarboxylic acids. The system has a melt viscosity of 10 to 300,000 cps. at 180 to 210 deg.C. A part or whole of the thermoplastic resin and/or tackifier is L type and/or D type poly-lactic acid or lactic acid copolymer resin derived from L type and/or D type lactic acid and other hydroxycarboxylic acids. The thermoplastic resin is one of or a mixt. of two or more of high molecular modified poly-lactic acid having a molecular wt. of higher than 10,000 on average selected from (a) urethanated poly-lactic acid, (b) esterified poly-lactic acid, (c) epoxy-modified poly-lactic acid, (d) urethanated modified poly-lactic acid, (e) silylated poly-lactic acid and (f) terminal esterified poly-lactic acid. The tackifier is one or more of low molecular poly-lactic acid having a mol. lower than 5,000 on average selected from (a) to (f). Other thermoplastic resins are polyamide, polyester, polyester-urethane, polycarbonate and polyolefin and other tackifiers are rosin ester and terpene-phenol resin. At least one wax component selected from natural wax, ester-amide wax and polyester wax and/or compatibilising plasticiser for poly-lactic acid is added to the compsn. in amt. 0.1 to 50 wt.%.
- ADVANTAGE - The hot-melt adhesive compsn. is degraded by alkali water

and microorganisms. Suitable for bonding of biodegradable plastics.(Dwg.0/0)

IW - ADHESIVE COMPOSITION BOND BIODEGRADABLE PLASTICS CONTAIN HIGH MOLECULAR THERMOPLASTIC RESIN TACKIFIER CONTAIN POLY LACTIC ACID COPOLYMER RESIN

IKW - ADHESIVE COMPOSITION BOND BIODEGRADABLE PLASTICS CONTAIN HIGH MOLECULAR THERMOPLASTIC RESIN TACKIFIER CONTAIN POLY LACTIC ACID COPOLYMER RESIN
